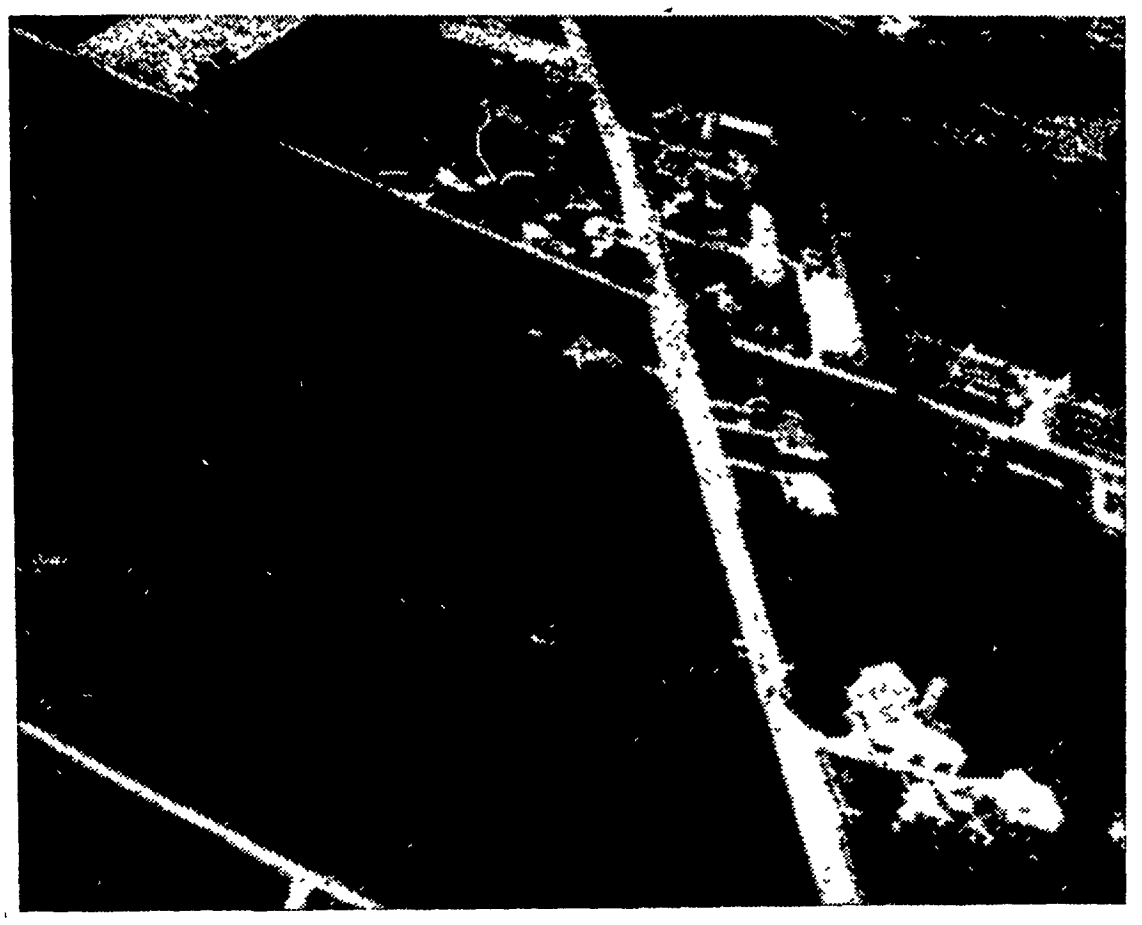
Lancaster Farming

VOL. 13 NO. 31 | Lancaster Farming, Saturday, June 29, 1968 | $2 00 Per Yea



LANCASTER COUNTY AS SEEN FROM THE AIR. The public is invited to participate in the Lancaster County Soil and Water District Air Tour tomorrow at the New Holland Airport.

Farmers Waiting For Sun To Dry Fields For Haying, Combining & Cultivating

"Wet," was the most frequent word heard around the Lancaster County farm community Thursday, as farmers patiently waited (sometimes not so patiently) for the sun to come out again and dry the fields enough to put tractors and horses to work at cultivating corn, making hay and combining barley.

In Southern Lancaster County the feeling emerged that crops have not really been damaged to any great extent Clair Hershey, Nottingham R1, said, "We haven't had the rain Lancaster has had so we're coming along fine Understand we aren't lacking for rain but we just missed some of the damaging downpour "

The combining of barley was reported started Wednesday in the lower Quarryville area and Everett Kreider said alfalfa and corn are growing "by leaps and bounds "

In the Gap area, Nathan Stoltzfus reported, "It rains so often I can't keep track of when . There is still some first cutting hay to be made and second cutting is coming along so rapidly, we will probably be

Co. Swinemen Set Field Day For July 20

The Lancaster County Swine Producers Association directors met Thursday night at the Farm and Home Center and voted to send a letter to all swine producers encouraging greater participation in the voluntary check off program being conducted by the swinemen in the county.

President John Henkel reported all buyers commission men and sales establishments in the county have agreed to collect the "Nickles For Profit" if individual producers ask for it Henkel stressed the necessity for everyone involved to ask "It's up to us to keep this program going," he said

In other business it was announced the county swine field day will be held Sat, July 20, at 10 00 a m at the Stauffer Homestead Farm, East Earl R1 The state swine field day was announced for Aug 8 at Penn State

N. Newcomer Wins Again At Penn State

Nelson Newcomer, son of Mr. and Mrs. Earl Newcomer, Washington Boro and entering the senior class at Penn Manor High School in September continued his winning ways in public speaking contests this week by placing first in State competition at the FFA Activities Week at Penn State. Newcomer has not been defeated this year to date having won the Region II

Nelson Newcomer

contest held April 25 at Millersville State College and the county contest on March 26, at Ephrata High School.

The next contest for the new State Champion is the tri-state competition to be held in New Jersey July 9 and 10.

In all, local FFA members at

Air Tour Set For Tomorrow

Rain Date Is July 6

If you would like to see Lancaster County farms and towns from the vantage point of an airplane, you have the chance tomorrow, Sunday, June 30, during the special Air Tour sponsored by the Lancaster County Soil and Water Conservation District. Everyone including both rural and urban people, is invited to participate in the tour leaving from the New Holland Airport, according to Aaron Stauffer, Chairman. Rain date is Sat July 6.

The newly crowned Queen of the Furrow, Lynn Heistand, will be at the airport at 2 p m to greet those taking the tour And a special period from 9 00 a m to 12 noon has been set aside to

Farm Legislation Anniversary Set To Honor Pioneer Leaders

A statewide ceremony to commemorate the 35th anniversary of national farm legislation and to honor farm leaders and individuals who had part in the formation and early administration of farm programs was to be held in Harrisburg yesterday

James W White, Chairman of the State Commemorative Planning Committee, 35th Anniversary of National Farm Programs, announced the observance at the Harrisburg Area Community College He said "National and State farm leaders were to be on hand to pay tribute to the gallant effort of those individuals who played such a vital role in a nationwide effort that salvaged American agriculture from the brink of despair and bankruptcy in the severe depression of the early thirties "

The original Agricultural Adjustment Act was signed into law on May 12, 1933—one of the first major acts of the first "Hundred Days" of President Franklin Delano Roosevelt's first term The original AAA was succeeded by the Production and Marketing Administration in 1941 and then by the pres-

You can switch to handling manure in fluid form

Sahlstrom has pioneer-proven a practical fluid manure system for 9 years on Swedish and American beef, hog and dairy farms It adapts easily to your present operation . . . doesn't require remodeling, extensive excavation, water, wiring or special bedding. And it's inexpensive Get all the details on the Sahlstrom homogenator and spreader, a better way to handle manure.

Farmers need only homogenator, spreader, and tractor.

Farmer uses his own holding tank No extra expense, extra equipment or daily duties required Use barn cleaner or scraper blade

GET RID OF APHIDS, FLEA BEETLES and COLORADO POTATO BEETLES ON POTATOES

Ask Us About PHOSPHAMIDON

Phosphamidon actually hunts pests down on potato plants. It kills them wherever they're hiding — under the curl of a leaf — in the crevice of a stalk.

This is because Phosphamidon doesn't kill by contact alone. It's absorbed by the foliage and goes through the entire upper part of the plant system. That means it kills hidden insects other sprays miss. Phosphamidon gets rid of Colorado potato beetles (even the resistant ones) — as well as flea beetles, leaf hoppers and all four kinds of aphids that attack potatoes.

Phosphamidom is absorbed quickly, too, so workers can enter the fields just a few hours after spraying. Why take chances on missing any potato pests. See us now for ORTHO Phosphamidon.

to hold up production, body condition . . .

SUPPLEMENT GRASS WITH PURINA

Good grass is a benefit. Good dairymen take advantage of every acre of pasture they have. Cows love grass and it stimulates milk flow.

Yet, good dairymen know that grass is 85% water. As summer advances it turns brown, losses its palatability and is even less nutritious.

Tests at the Purina Dairy Center proved that cows fed a grain supplement with grass produced up to 20% more milk. They kept up in body condition, too, and held up better in production in following lactations.

Visit us at the store, or give us a ring. We'd like to suggest Purina's Research-proved plan for suppl menting grass to help you get more milk from yo herd over the summer.

Big, Bold, New Market For Butterfat

It is refreshing, this week, to find among the hoards of gloomy, don't-know-what-to-do-next mail that stacks up on this editor's desk, a fresh action approach to creating a "Big, Bold, New, Market for Butterfat". Taking off on the recent survey that indicates a growing number of Americans of all income levels are consuming progressively poorer diets mainly because of the drop in calcium consumption as a direct result of a 10 percent decrease in the use of milk and dairy products, Edwin L. Richman, of Enriches, Inc. in Chicago, says, "It is my contention that the number one problem of "Dairy Interests" is communications. If the producers and their leaders do not know of alternative markets and means of marketing their product how can we expect them to make a choice. Likewise if consumers have never had an opportunity to use a product because it has not been offered for sale, how can we expect them to have a preference for the product?"

Richman is already nationally marketing butterfat in liquid oil form in bulk quantities to the food service field. Putting out his product as "Buttola", and offering it as "The Gold Standard of Cooking," Richman not only is interested in selling his product to consumers but also believes so much in the superior qualities of anhydrous milk fat as a cooking medium and the potential to open whole new horizons in dairy products marketing, he has registered the Buttola name and hopefully presents it for industry acceptance as the name for anhydrous milk fat.

From research and efforts to introduce Buttola (anhydrous milk fat) as a cooking medium to the food industry, Richman says he also learned that even though surplus milk fat was considered a big problem for sometime, the dairy industry had not offered to supply anhydrous milk fat to the food industry. "Furthermore," he says, "I discovered that the cooking qualities of anhydrous milk fat are those most sought after by the food industry."

Richman himself, surprisingly, in light of his dairy product fervor, does not have a dairy industry background. Nevertheless, he's an enthusiastic booster of butterfat superiority to the point where he's spending his own time and money attending numerous dairy conventions to gain "converts" from among dairy industry people to one of their own major products — butterfat.

In a hard-hitting twelve-page booklet using the best advertising techniques, Richman attempts to reach the public by starting off with this dedication to mothers:

To the millions of mothers that daily are faced with the problem of planning and preparing meals for their families —

Meals that satisfy the nutritive needs of growing children and vigorous active adults, as well as those less active adults that have dietary restrictions —

Meals from foods that are prepared to be appetizing, flavorful, wholesome, palatable, nutritious and readily digestible; to maintain health and vigor; it is equally as important that the cooked food consumed has these essential qualities whether the individual eats a little or a lot.

To the millions of cows that must necessarily be mothers before they can produce milk. —

A cow is a very special kind of mother that is often referred to as "the foster mother of the human race." Cows are credited with producing milk that is acclaimed "The World's Most Perfect Food." All the vitamins recognized at the present time are contained in milk.

The milk fat in milk is said to have "unique" flavor intensification and other distinctive desirable cooking properties that have been recognized only in "butter made" foods. These unique properties are attributed to the fact that a cow, because of her mammary (mother) glands, can do more, much more, through her complex digestive processes, than simply transform feed containing vegetable fats into animal fats.

It is the supreme objective in developing and producing a superb cooking medium to have a product with these extra special ("unique") qualities that intensify seasoning and enhance natural food flavors.

To the millions of mothers that would avail themselves of a cooking medium that "Enriches" the quality of the foods they prepare and raises the standard of excellence of the meals served to their families — To these mothers, BUTTOLA is submitted as "The Gold Standard Of Cooking" a truly superb cooking medium that can only originate and be produced by a mother.

To assist mothers in utilizing the rare, unique qualities of this superb product processed from milk, the Developer of BUTTOLA hereby dedicates this brochure to these mothers that they might effectively prove for themselves that they can "make the best better with BUTTOLA."

Like we said, "It is refreshing." Refreshing to hear of someone who will take the "bull by the horns" and sell the part of milk that isn't supposed to be able to be sold. It is refreshing to hear of someone with no farm background support the farmer and his products. And most of all it is refreshing to hear of someone who will unselfishly open up the fruits of his own labor in an attempt to benefit the entire dairy industry.

At least that's the way it looks from where we stand.

Across The Fence Row

The pioneers who blazed the trails now have descendents who burn up the roads.

* * *

By the time most people get to green pastures, they are too old to climb over the fence.

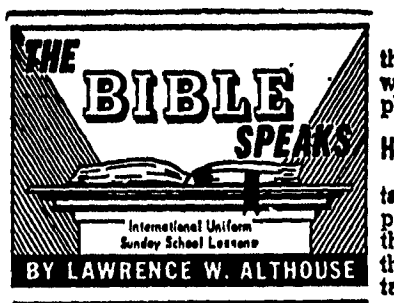
* * *

Success is never attained by staying awake at night, but by staying awake in the daytime. Worry never helped anyone — except a competitor.

Weather Forecast

The five-day forecast for the period Saturday through next Wednesday call for temperatures to average near normal with daytime readings in the upper 70's to mid 80's and over-night lows the upper 50's to low 60's Warm the first part of the period and cooler in the latter part. Normal high-low for the period is 86-64.

Rain may total greater than three-fourths of an inch in most sections with showers likely throughout the period.



BY LAWRENCE W. ALTHOUSE

THE HARDEST

Lesson for June 30, 1968

Background Scripture: James 4:13 through 5:20. Devotional Readings: Luke 18:1-8.

Someone has said that there are three keys to Christian living: worship, witness, and waiting. For me, worship is sometimes difficult, witness usually is, but waiting, I find, is almost impossible. It seems to be my "hardest subject" in the school of learning-by-experience.

Rev. Althouse

One will never get anything to grow in his garden if he persists in pulling up his plants each day to see how they are taking root. Yet, this is precisely what many of us do with our prayers. We are impatient for obvious results and cannot bear waiting for God to answer us in his good time. Our problem is that unless we see something happening, we are sure that nothing is taking place.

Belated Miracle

A little boy was spending the summer on a farm. He was fascinated by a hen who, according to his aunt and uncle, would soon hatch the eggs upon which she was sitting. Most wonderful of all, out of each egg, promised his aunt, there would come a little yellow chick.

Thus, each morning before breakfast the boy raced to the henhouse to see whether the miracle had taken place. As the days passed, however, and nothing seemed to happen, the boy became discouraged. The eggs had not changed at all. They looked exactly as they had when he had first seen them.

He came to the reluctant conclusion that his aunt and uncle had deceived him, that the miracle would not take place as they had promised. Out of habit, not of expectation, he continued his daily visits to the henhouse. Then, one morning, he discovered a brood of little chicks in the nest. The miracle had happened! It seemed so strange to him that all this should happen overnight, when for weeks nothing had taken place in the henhouse.

Hidden Miracle

Actually, the boy was mistaken. Though nothing had appeared to be happening during those long weeks, inside the eggs the wonderful changes were taking place all the while. The miracle was happening before his eyes, but he was not able to see it. In God's own time the miracle came to light.

This, said Jesus, is the way the kingdom of God grows before us. We may not see the evidences of its growth, but it is happening all the same and in God's own time it will be revealed. When a seed is planted in the earth, no one can see the process of germination and growth until at last it pushes to the earth's surface. Yet the growth has been taking place right along, though hidden from us.

Can we not apply this to our own lives? How often we wait impatiently for God to do what we have asked or he has promised. The little boy busily inspected the henhouse daily and nothing seemed to be taking place, so he assumed that nothing was happening. What he did not know and what we often overlook is that God's work often goes on unseen. The results and fruits of that work are not revealed until, according to his wisdom, the right time has arrived.

Miracle Fulfilled

The early church waited for what they believed would be the immanent return of Christ. Some of these became impatient, for it seemed that nothing was happening to bring that great day closer. Thus James advised: "Be patient, therefore, brethren, until the coming of the Lord", (James 5:7 RSV). James did not know when the kingdom would be given in its fullness, but he knew that it would happen when, in God's wisdom, the time was right. Thus, the counsel to be patient was the highest kind of wisdom.

As we wait for the fulfillment of the kingdom, therefore, we must worship, witness, and wait—but the hardest of these is to wait.

NOW IS THE TIME . . .

By Max Smith

Lancaster County Agent

To Be Careful with Spring Oats

The best stage of maturity to cut spring oats for hay or silage is shortly after heading and when the plant is in the blossom to milk stage; this time of cutting will give the greatest amount of feed value considering both plant and seed-head. If the crop is cut for hay in the dough to ripe stage and when changing color, it should be allowed to go through a 6-week curing time in the mow, there have been some cases of oats hay poisoning when fed immediately at this stage of maturity.

To Operate Combines Slowly

With normal weather conditions grain combines will be running for the next month; with severely lodged barley and some wheat this will not be an easy operation. Combine operators are urged to wait until the grain is dry enough to go through the machine and then drive slowly enough for the machinery to separate the grains from the straw. The large amount of volunteer growth following small grain harvest each year reflects the amount of grain that was not harvested. Take time to do a good job and practice farm machinery safety.

To Teach Water Safety

There's nothing quite as refreshing as a dip in a farm pond or a creek after a hot summer day. However, precautions should be taken to prevent another kind of farm accidents — drowning Parents should teach their children water safety rules and provide rescue equipment such as wooden ladders, rope, wooden planks, or inflated inner tubes. Have them near the edge of the water and be certain every member of the family knows what to do in case of emergency.

● Anniversary

(Continued from Page 1)

ent Agricultural Stabilization and Conservation Service in 1953.

The event was intended to commemorate the 35th anniversary of national farm production adjustment legislation and to honor Pennsylvania farmers who administered original "Triple-A" programs of the thirties. The planned program will represent a panorama of 35 years unfolding agricultural history and progress in Pennsylvania and the nation.

There are about 400 farmers and citizens still living who helped put the initial programs of Triple-A into effect from 1933 to 1940 and to whom citations of recognition will be presented. Certificates of Merit awarded in behalf of U.S. Secretary of Agriculture Orville L. Freeman recognized the pioneering effor and contribution to American agriculture and the public interest during the formative years of National farm policy.

Local people expecting to attend were. Samuel Becker, Lit itz R3; A. K McDonald, Wash ington Boro R1; J. Fred Shenk New Providence R1; Merry Catherine Byrd, Lancaster; Dor othy Y Neel Conestoga; Ernes W Eshleman, Paradise R1 Silas N Hershey, Gap R1 and the county committee, Fred G Seldomridge, Elmer L Huber and John J. Herr.

(Continued from Page 1)

able to just keep cutting all summer" Stoltzfus said.

In Marietta, barley was reported 80 percent lodged. Donald Ney reported the straw too green to harvest but said the grain was in remarkably good condition

And on the Roy Mentzer farm in New Holland the report was that hay making was very much behind schedule. Mrs Mentzer thought farm work was maybe even three weeks behind the usual timing.

Jay Garber Jr , Lancaster R6, reported the rains a good way to try out any soil conservation practices you might have.

Garber has 3½ miles of terraces and two different waterways and reported they carried well under the destructive rains experienced in the Lancaster area

M. M Smith reported extensive damage to crops in the county, mentioning tobacco plants covered with mud and washed out, corn fields under water several times and some fields of barley beaten down so hard they will show extensive loss of grain "We need the sunshine very badly," he said.

Conditions across the state followed the pattern set in Lancaster County with the Pa Crop Reporting Service reporting frequent rains limiting field work In the east central district, floods along river bottom lands were reported causing some damage to crops On days when conditions were favorable, farmers were busy at cultivating row crops, spraying for weed control and making hay and silage. Soil moisture supplies are adequate to surplus in all areas of Pennsylvania

● Wins Again

(Continued from Page 1)

Penn State this week brought home 13 Gold medals; 8 Silver medals; 9 Bronze medals and 6 honorable mentions. Seventy-five local FFA members were at Penn State for the activities.

Other winners included:

Dairy: Leroy Eshleman Penn Manor, 6, gold; Edwin Brenneman, Lampeter-Strasburg, 9, gold; Henry Hershey, Warwick 15 silver; Jay Smoker Ephrata 22 bronze; Larry Burkhart New Holland, 30 bronze.

Dairy Products: David Harting Ephrata 4 gold; Leon Boll, Warwick, 12 silver; Galen Hackman, Ephrata, 17, h.m; David Enck, Solanco, 22, h m.

Meats: Jeffrey Pfautz, Ephrata, 4 gold; Abe Fisher, Penn Manor, 20, h m

Livestock: David Hoover, Penn Manor, 2, gold; Eugene Brendle, New Holland 23 bronze; Robert Wanner, Pequea Valley, 26, bronze.

Poultry: Claude Miller, Penn Manor, 6, gold; Wilmer Groff, Manheim Central, 8, gold; Lowell Sensenig, Elizabethtown, 9, gold; Michael Baum Elizabethtown, 11, silver; David Kilheffer, Penn Manor, 15, silver; Jay Harnish, Penn Manor, 25, bronze; Lenord Sensenig Ephrata, 32 h m; Clair Erb, Penn Manor, 37, h m.

Tractor Driving: Carl Campbell, New Holland, 5, gold.

Farm Mechanics: Barry Nickle Pequea Valley, 6 gold; Lester Heistand, Manheim Central, 13, silver; John David Brackbill, Lampeter-Strasburg, 16, silver.

Land: Matthew Young, Solanco, 4, gold; Robert Seifrit, New Holland, 9, silver; Carl Martin, New Holland, 12, bronze; Clair Oberholtzer, Elizabethtown, 13, bronze; Jay Myers, Solanco, 16, h.m.; Dale Heffley, Manheim Central, 18, h.m.

Agronomy: Clair Witwer, Lampeter-Strasburg, 8, silver; Paul Clark, Pequea Valley, 11, bronze; Kenneth Reitz, Solanco, 12, bronze.

Interview: Galen Yoder, New Holland, 4 gold.

THE JR. AG. FIELD TRIP of Ephrata High School was held last week. Places visited included Bethlehem Mines Corp., Cornwall; Cornwall Furnace Museum; Weaver's Bologna Co., Lebanon; Palmyra Pheasant Farm, Palmyra; Pa. State Police Academy and Milton Hershey Farms at Hershey.

Use Pesticides Safely

When used according to directions and precautions on the label, household and home-garden pesticides can be helpful aids remind Penn State extension specialists Remember to use a pesticide only when it is needed and the one recommended for the pest, read the label before you buy and make sure the pest you want to kill is listed on the label, read the label before using, then follow directions and precautions

" . . . the entire and absolute freedom of the press is essential to the preservation of government on the basis of a free constitution."—Daniel Webster.

RED ROSE®
DAIRY FEEDS
and SUPPLEMENTS
pay off in the milk pail — where it counts most!

GOOD FEEDING pays off here!

It's in the milk pail where the results of good feeding really show. How the milk gets in the pail depends largely on the roughage, grains and supplements you use to help the cows produce it.

You know, it's essential to feed balanced, complete rations that contain all of the necessary vitamins, minerals and nutrients that are needed for production and maintenance. It's only natural that you will want to use your home-grown grains. But, remember, **mix them with Red Rose Dairy Supplements** to assure proper proteins. Then, you can be sure that the cows in your barn are eating just about the best feed you can provide If you use complete feeds — choose from the complete line of Red Rose Dairy Feeds They're available in many protein levels.

WHY DON'T YOU — be determined to earn more profit from your dairy cows? **Decide** to provide your cows with better nutrition. **Decide** to use Red Rose Dairy Supplements and Red Rose Dairy Feeds in your feeding program. **Decide today!** You'll be pleased with the results Red Rose Feeds give . . . and you'll be pleased with the extra money they will earn for you.

You will have the choice of a northern or a southern route Each will take about 20 minutes The northern will include such points as. Ephrata, East Cocalico, West Cocalico, Clay, Elizabeth and Warwick Twps ; and the southern route will include Upper Leacock, East Lampeter, Pequea, Conestoga and Manor Twps and the city of Lancaster.

The Lancaster County Soil and Water District is a group of cooperating agencies working to implement the best practices in total conservation of natural resources.

Spotlighting Game Outlawed After Midnight

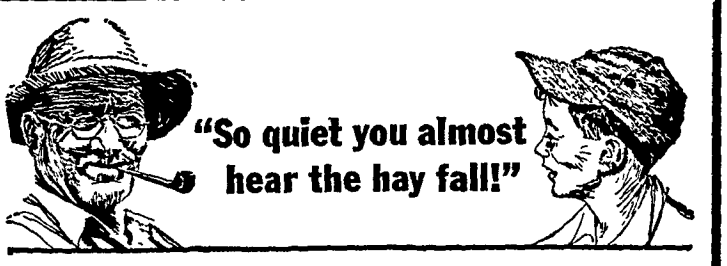
The spotlighting of big game between midnight and sunrise will be illegal in Pennsylvania after September 1, the Game Commission announced this week

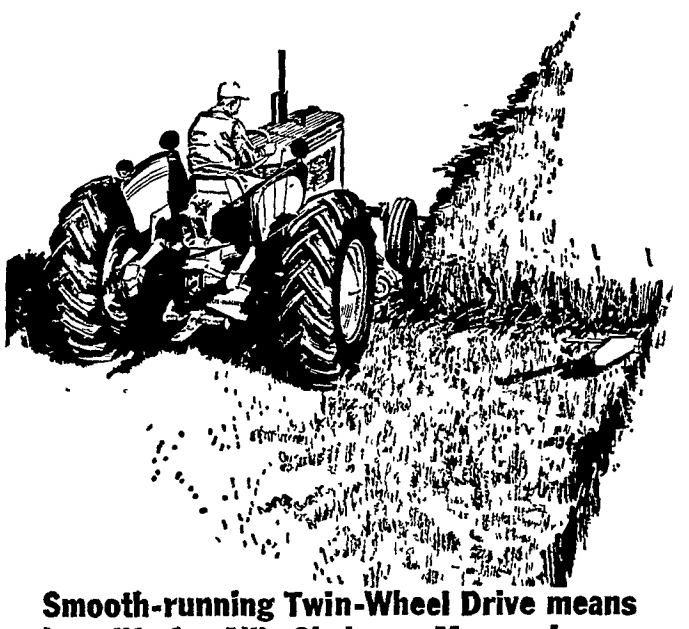
Governor Raymond P Shafer has approved legislation which makes it illegal to cast the rays of a spotlight, headlight or other artificial light upon big game animals on a highway, in a field woodland or forest from midnight prevailing time until sunrise

"Of course the law does not apply to a motorist suddenly confronted with a deer darting into the path of his vehicle," Game Commission Law Enforcement Chief James A Brown said "It is intended to prevent the deliberate practice of spotlighting big game animals"

Spotlighting of deer is a popular practice in the state being enjoyed by the non-hunting public as well as sportsmen The new law will not curb the sport during evening hours; it only curtails the practice after midnight.

Another problem brought about by spotlighting is the danger of slow moving vehicles The driver and occupants of the car become so engrossed in seeing the deer, that they fail to realize the hazard they present to other traffic Many spotlighters leave the road and enter cultivated fields When this happens, the landowner sustains costly damage to crops.





Smooth-running Twin-Wheel Drive means long life for Allis-Chalmers Mowers!

Eliminating the old-fashioned pitman comes close to eliminating *vibration* that shortens the life of mowers! *Four* quiet 80 Series Mowers let you cut hay the way you wish. THE FUN SIDE OF 4-H is evident at the 4-H Soil and Water Conservation Club "doggie roast" and picnic. The members, leaders and parents enjoyed this outing at the Vincent Hoover farm near New Providence. The event also included a field trip to observe good conservation practices in strip cropping, contouring and terracing. There were 52 members, leaders and parents present including Jay W. Irwin, Assistant County Agent.

4-H Club Activities

PENN MANOR KOOKIE KOOKS

The first meeting of the Penn Manor Kookie Kooks was held last week at Stehman's Church Pavilion. Linda Porter led in the election of officers. The following were elected: president - Terri Brenner, vice president - Linda Leaman, secretary-treasurer - Darlene Eshleman, songleaders - Connie Hoak and Donica Neff and game leaders - Kris Stehman and Jenny Campbell. After the meeting was adjourned Kris Stehman made brownies and Connie Stehman made muffins

The second meeting was held on June 26 at the Penn Manor Junior High School Announcements were made after which Linda Kauffman gave a demonstration on how to set a table. After the business meeting was adjourned, the first year girls made sandwiches and a beverage while the second year girls made baked custard and a salad.

The next meeting will be held at 11:30 A.M. on Wednesday, July 3, at Penn Manor Junior High School.

CLASHING THIMBLES

The second meeting of the 4-H Clashing Thimbles Sewing Club was held recently at the Stehman's Church Pavilion Everyone received a book, entitled Grooming Magic for Modern Girls. The members then discussed dues.

A demonstration was given by Mrs. Lois Porter on how to sew on a button.

The club leader is Mrs. Edgar Porter.

NORTHERN HOLSTEIN

The Northern Lancaster County Holstein Club met last week for its annual ice cream party with the Lebanon County 4-H Holstein Club as guests A baseball game preceded the party

Beef - Dairy Crossbreeds

Calves born to Brown Swiss dams bred to bulls of beef breeds weighed more and made higher gains than other crosses or straightbreds in a recent ARS study.

Brown Swiss dairy cows were bred to Hereford, Angus, and Charolais beef bulls. Matings also were made between bulls and cows of these three breeds to compare all possible straightbred and crossbred combinations with the beef-dairy crosses.

Data were collected over a 4-year period at the U S Range Livestock Experiment Station in Miles City, Mont., by ARS cattle researchers, O F. Pahnish and J. J Urick, ARS statistician B W. Knapp, and J. S. Brinks, now of the Colorado Agricultural Experiment Station, Fort Collins.

On the average, crossbred steers from Brown Swiss mothers outweighed steers from beef mothers by 12 pounds at birth, even though both groups of steers were sired by the same bulls. Crossbreds with Brown Swiss mothers gained 0 3 pounds more per day before weaning and weighed 74 pounds more than the beef breeds when both were weaned.

The researchers say the heavy birth weights of calves born to Brown Swiss mothers can be associated with the relatively large frame of that breed. The high level of milk produced by the Brown Swiss dam appears to have contributed to the fast preweaning gains of their crossbred calves.

Eshelman Expanding Tampa, Florida Plant

Major expansion of feed manufacturing facilities at John W. Eshelman & Sons, Tampa, Florida plant for the efficient production of Red Rose Feeds is expected to be completed in late 1968. it was announced by Hugene McKoy, plant manager.

The Tampa plant, currently serving most of Florida, combines with Eshelman manufacturing plants in 5 other locations to form a network which serves independent dealers in 22 Eastern states, and 39 foreign countries Eshelman manufactures more than 100 different Red Rose feeds for livestock, poultry and pets, and has pioneered many manufacturing systems, types of products and nutritional programs in its more than 125 years of business

DO YOU HAVE
MANUE HANDLING PROBLEMS?

Efficient Husky Liquid Manure System has the answer to handle all kinds of manure — hog, chicken, beef and dairy units are very inexpensive.

Prize-Winning Cakes

SPENCE

Anyone who admits to being a cook takes great pride in turning out a beautiful-looking, delicious-tasting cake. One need never want for a cake recipe; they can be found in magazines, newspapers, food package wrappers, greeting cards — just about anywhere. In fact some companies send recipe flyers along with their monthly statements. So keep your eyes open — you might be missing a treat.

An ideal example of a prize-winning cake is Peppermint Topped Fudge Cake. Made with buttermilk and cocoa, it's a perfect chocolate cake made by the conventional method. The Peppermint Fluff Frosting uses the egg white leftover from the batter recipe.

PEPPERMINT TOPPED FUDGE CAKE

- 1 cup sifted enriched flour
- ½ cup sugar
- ¼ cup firmly packed light brown sugar
- ½ teaspoon baking soda
- ¾ teaspoon salt
- ¼ cup cocoa
- ¼ cup shortening
- ⅔ cup buttermilk
- 1 egg yolk
- 1 teaspoon vanilla extract

Peppermint Fluff Frosting*

Sift together all dry ingredients. Blend in shortening and buttermilk at low speed with electric mixer. Then beat two minutes at medium speed. Blend in egg yolk and vanilla. Beat for additional two minutes at medium speed. Pour into a greased, waxpaper-lined 8-inch square pan. Bake in preheated 350 degree oven, 30 to 35 minutes, or until done. Cool 10 minutes on wire rack. Remove from pan. Cool and frost.

***PEPPERMINT FLUFF FROSTING**

- 1 egg white
- 1¼ to 1½ cups sifted confectioners' sugar
- ¼ teaspoon vanilla extract
- 2 tablespoons light corn syrup
- 2 tablespoons crushed peppermint candy
- Pink or green food coloring, optional

Beat egg white until soft peaks form. Gradually add sugar; beat until dissolved and frosting stands in peaks. Add vanilla and corn syrup; beat until frosting again holds stiff peaks. Add food coloring, if desired, and stir in peppermint candy.

* * * *

FUDGEROON CAKE

Coconut Mixture:

- 1 egg white
- 1 tablespoon water
- 1 teaspoon vanilla
- ½ cup sugar
- 1 7-ounce package (2 cups) packaged, grated coconut
- 1 tablespoon flour
- ¼ teaspoon salt

Combine egg white, water and vanilla; beat till foamy. Add sugar gradually and continue beating until stiff, glossy peaks form. Fold in coconut, flour and salt and set aside.

Cake Mixture:

- 1 cup chocolate morsels (semi-sweet)
- ½ cup water
- 1 teaspoon instant coffee
- 2 cups sifted flour
- 1 teaspoon baking powder
- 1 teaspoon baking soda
- 1 cup sugar
- ¾ cup sour cream
- ½ cup shortening
- 2 eggs
- 1 egg yolk
- 1 teaspoon vanilla
- ½ teaspoon salt

Combine chocolate morsels, water and instant coffee; place over hot (not boiling) water, stirring occasionally till chocolate melts. Remove from water. Sift flour, baking powder and baking soda and set aside. Combine sugar, sour cream, shortening, eggs, egg yolk, vanilla and salt in bowl and mix thoroughly. Blend in flour mixture alternately with melted chocolate mixture. Pour into greased 13x9x2-inch pan two-thirds of the cake mixture.

Two important things when borrowing money

You need a sharp pencil plus the specialized financial advice of Farm Credit to determine how your financial needs can best be served. Farm production must be maintained, even increased if possible. Providing the financing to insure this is Farm Credit's job. Farm Credit loans are available now for any sound farm need. And, at realistic rates. Farm Credit interest is based on the unpaid balance of the loan. That saves you money.

Dear Long and Bomberger:

With all this rain we've had, I've become very interested in my roof. What can you do for me?

Signed:
Leaky

Dear Leaky:

For roof repairs, we've got cedar shingles, both sawn and hand split, in the short (repair) sizes. Of course, we have them full size, too, for new roofs as well as asphalt, slate and asbestos shingles. For patio roofs, we offer a choice of three colors in fiberglas.

Incidentally, if your window sash has weathered, you don't need a whole new frame. See us for replacement sash.

Yours truly,

LONG AND BOMBERGER HOME CENTER
45 North Broad St. in Lititz

YOUR REMODELING HEADQUARTERS

GRANGE NEWS

Fulton Grange #66 held their regular meeting June 24 at their hall in Oakryn with Clifford W. Holloway Jr., Master, presiding at the business session.

The following members are attending the Pennsylvania State Grange Leadership Conference at Gettysburg College June 25 to 27: Mrs. Stanley Stauffer Jr., Mrs. Jesse Wood, Mrs Harold Alexander, Mrs. Jacob Fantom and Mrs. Gyles Brown.

"Go-to-Church" night was observed June 16 at the Grange Hall with the Rev. Roy W. Townsend preaching and Miss Elaine Galbreath furnishing special music. The service was preceded by a covered dish supper.

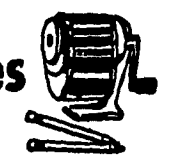
The Youth Committee held their final youth dance for this season June 15. They are sponsoring a bus trp to Baltimore, Md. July 26 to see the Orioles and Detroit Tigers baseball game. The bus will leave Penn Hill at 5:45 p.m. Dennis Carroll, Peach Bottom, is in charge of sales of tickets. The Youth Committee is also sponsoring a picnic and swim party for all Grangers at Elk Neck State Park, Md. July 10 leaving the Grange Hall at 1 p.m. The meal will be at 6 p.m. and later in the evening a watermelon party.

Miss Donna Brinker, Assistant Home Economist of Penna. Power and Light Co. gave a small appliance demonstration. She prepared several foods in electric blenders, rotisserie and skillet.

Pomona Grange chorus rehearsal will be held June 30, 8 p m. at Fulton Grange Hall.

The next meeting will be July 8 and Fulton Grange will be host to the Lancaster Co. Pomona Grange visitation meeting. Salisbury Grange will fill the officers' chairs and Colerain Grange will present the program J. Collins McSparran, Past Master of the Pennsylvania State Grange will be the speaker.

Correspondence Courses



ENTERTAINING IS FUN

When was the last time you entertained someone in your home? Perhaps you would be embarrassed if you answered that question honestly. The real answer is often a lack of condensed information on how to entertain with a minimum of effort and maximum success.

If this is your problem, you will want to get a copy of a home study course, "Guides For Entertaining," offered by The Pennsylvania State University. Condensed, clearly and systematically written, the course teaches you to plan your entertaining in advance. This helps you to be a more gracious hostess and helps to create a relaxed atmosphere for your guests.

There is information to help you decide what kind of party to have, whom to invite, how to issue invitations, and the importance of budgeting your time and money. Menu guides, with recipes included, aid you when choosing food for coffee hours, receptions, dinner parties, or buffets.

Bonus sections in the course discuss good grooming practices, choosing the correct clothes for the occasion, and children's parties.

To help make your entertaining pleasant, easy and successful, send for the "Guides For Entertaining" course, written by specialists on The Pennsylvania State University staff. Put $2.25 in an envelope, along with your name and address, and mail it to Guides For Entertaining, Box 5000, University Park, Pennsylvania 16802. The complete course will be sent promptly. Have fun when you entertain.

● For The Farm Wife

(Continued from Page 10)

Spoon coconut mixture over top. Top with remaining cake mixture. Bake at 350 degrees for 40 minutes. Cool in pan.

Prepare a glaze by combining 1½ cups sifted confectioners' sugar and 4½ teaspoons milk in bowl, stirring until smooth. Spread evenly over cooled cake. Let stand till glaze sets. Cut into 2-inch squares. Makes 24 squares.

Cotton can be warm or cool, depending on its weave.

Vacation Checklist

Don't forget these vacation essentials:
Sunglasses.
Flashlight.
Camera and film.
Paper towels, soap, water, paper handkerchiefs.
First-aid kit.
Pillow and lightweight blanket.

If you're traveling with an infant, pack disposable diapers, plug-in electric bottle warmer, and a folding stroller.

Take along fresh fruit for snacks.

Keep most of the luggage locked away to prevent accidents during sudden stops, and to prevent theft, if you forget to lock the car at stops.

Check the map and mark your route carefully.

Safety check your car several days before the trip.

Enlist Help of Children Around the House

Duties around the house can give young children a sense of importance and belonging to the family. But remember that children always want to do jobs beyond their ability and older children often argue about who should do what and who has the best job.

Preschoolers can help sort laundry and will delight in pointing out objects that are alike such as socks. They can collect things that need no ironing and carry small stacks of folded articles to their proper places.

If you lang your laundry on a clothesline, children can hand you clothespins and learn to count at the same time.

In the kitchen, children can dry silver, pots and pans, and other unbreakables.

You can also teach them how to set the table. A chart which shows the proper place for each item will help. You can post this guide on a wall near the table.

School age children may find chore cards a bit of mystery and put an end to many arguments. List tasks on cards Let each child draw an assignment each day

When you plan to ask older children to assist with a big job, such as cleaning a garage, it's best to give them some advance notice. See that the jobs are such that time and energies available will not be overtaxed. Then let them assume their own responsibility for the task, planning it, and completing it on their own.

Natural Resources Control Social And Economic Growth

Natural resources must be used more wisely than ever before to fulfill present needs and still be available for enjoyment by future generations, a wildlife specialist at The Pennsylvania State University declared recently.

"These resources form the basis of our life and culture, and they control social and economic growth," Robert G. Wingard, chairman of forestry and wildlife Extension at Penn State, told delegates participating in a statewide Youth Conservation Day at nearby Camp Kanesatake in Huntingdon County.

Wingard served as main speaker at the field day sponsored by the Pennsylvania Federation of Woman's Clubs. The West Virginia Pulp and Paper Company and Pennsylvania Forestry Association sponsored awards for conservation youth projects.

"Today we see many changes on the face of Pennsylvania. There is less land in farms, increasing forest acreage, suburbs moving across the countryside, and more people seeking the benefits of unspoiled farm and forest environments," the Penn State official pointed out.

Although our capacity to produce an abundance of food and wood is increasing rapidly, it is clear that people are demanding more land and water for homes, industry, farms, recreation, hunting, fishing, highways, and scenic beauty, he said. All of this makes conservation programs and planned resource development even more important.

Wingard, in discussing Pennsylvania water pollution problems, emphasized that water is the common denominator that ties together all of man's interests On its journey from watershed to sea, water affects fishing downstream, recreation on a man-made lake, irrigation on a valley farm, flood damage in a town, and safe supplies for human use.

"Pollution from sewage and industrial wastes, acid mine drainage, pesticide chemicals, and other contaminents that enter the stream at any point will have far reaching effects throughout the watershed," the Extension Service specialist said "In many cases the fisherman is most immediately affected by pollution; but when water no longer supports fish, it has lost much of its value for other uses, too," he added.

Pennsylvanians have always been quick to grasp the initiative in conservation efforts. This was partly because we had such an abundance to start with, partly because of the harsh lessons taught by exploitation, and also because of the wisdom and foresight of dedicated leaders," Wingard emphasized.

He cited several Commonwealth projects that have contributed to improvement in conservation efforts. These include the 25,000 private ponds constructed in the past 25 years; Allegheny Reservoir at Kinzua; Raystown Reservoir in Huntingdon County; Tocks Island National Recreation Area on the Delaware River, and pollution control legislation.

Wingard, in his talk, complimented the youth on their project accomplishments and challenged them to increase their efforts to improve people's understanding of conservation programs. Only a well informed citizenry can make intelligent decisions as to how natural resources can best be used to meet immediate and future needs.

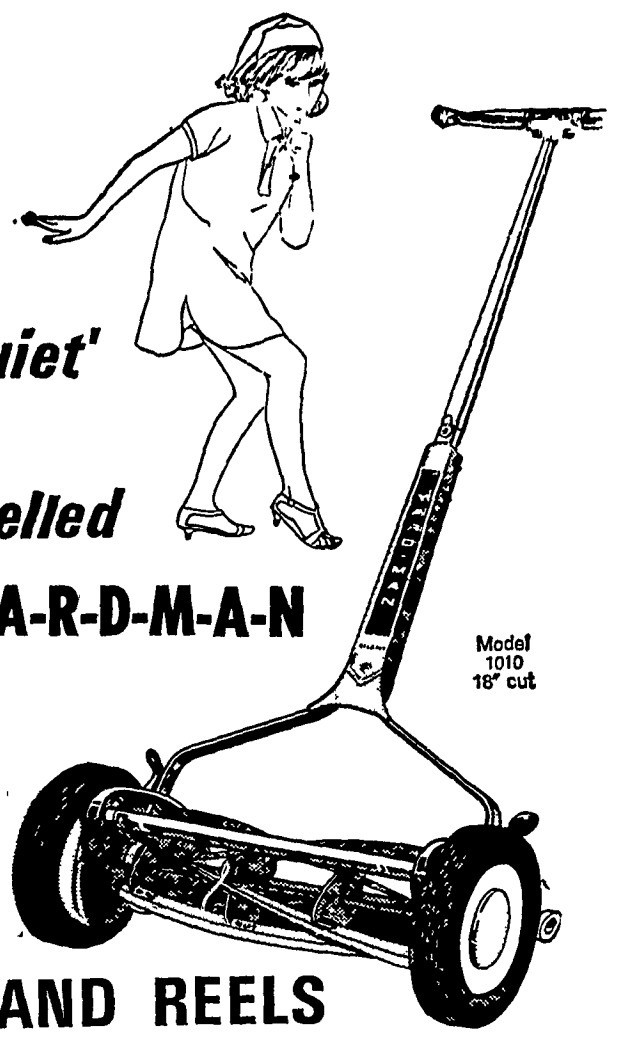
Longer Engine Life

A complex nickel chemical in motor oil increases the life of certain automobile engine parts by decomposing and producing nickel oxide which is plated out at points of load, thus reducing the rate of wear.

'quiet' is spelled

Y-A-R-D-M-A-N



HAND REELS

Many people have stated, "Yard-Man Hand Reels are so quiet, it's hard to believe I am actually cutting my lawn."

If you doubt this, the one sure way to find out is to try it! When you do, you'll get another worthwhile surprise — 'Silent' Yard-Man Hand Reels are also the easiest pushing mowers in the world! The operation is silent and without effort—the blades cut like scissors, smooth and clean Hand operated Fast Set Wheel and Roller Adjustments always maintain the correct cutting plane.

A little effort with a Yard-Man goes a long way towards a beautiful lawn.

Yard-Man also has a 6" or 8-cnd Trimmer that operates the same way.

We specialize in sharpening silent type mowers.

USDA Survey Shows Gains In Use Of Convenience Foods

Domestic food donations by the U.S. Department of Agriculture to improve diets of school children, needy families, and needy persons in charitable institutions totaled nearly 1.4 billion pounds for the first 9 months (July 1967-March 1968) of this fiscal year, nearly 20 percent more than during the same period a year earlier.

Schools received more than 713 million pounds of donated food during this 9-month period. And schools taking part in USDA's National School Lunch Program received an additional 206.3 million pounds through special purchases made by USDAS Consumer and Marketing Service. The 713 million pounds is an increase of nearly 44 percent from the same period a year earlier. Among the reasons for USDA's increasing food donations to schools are these: Enrollments in elementary schools and high schools have been increasing steadily and costs of serving school lunches have increased.

Food donations to the States for distribution to needy persons in family units came to more than 537 million pounds. In March, 3 5 million persons received food donations. Another 2 4 million benefited from USDA's Food Stamp Program. Thus, 5 9 million of the Nation's needy in family units got Federal food assistance at the end of the third quarter of this fiscal year.

USDA food donations for the 9 months to help feed needy adults and children in charitable institutions and children in nonprofit summer camps came to nearly 107 million pounds, an increase of 6 9 percent over the same period a year earlier.

One or more of USDA's food donation programs, carried out through State and local governments, operated in all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific during the first 9 months of fiscal 1968 Needy families in parts of 47 States, 3 territories and 25 Indian reservations, got USDA-donated food during that period.

The U.S. Department of Agriculture acquires food, suitably processed and packaged, and ships it to the States and territories for use in their school lunch, needy family, and other food-aid programs Any donated food in these distribution channels may be diverted for immediate use to aid victims of natural disasters

Cottonseeds are said to have been planted first in Florida in 1556

RemoveClippings To Improve Lawn

Give your lawn a healthy, well groomed look this summer by removing grass clippings immediately after mowing, says Dr. William H. Mitchell, extension agronomist at the University of Delaware.

Contrary to popular belief, clippings do not make a lawn green and fertile, he explains. In fact, they may actually harm the grass. Clippings left on the lawn may add to the accumulation of thatch, the dead material around grass roots. This, in turn, interferes with air and water movement and encourages disease.

A thick layer of thatch may prevent rain or irrigation water from reaching the soil, says Mitchell. Under these conditions, grass will grow poorly and will probably become brown and unattractive by midsummer.

Clippings may be particularly serious early in the season when grass is making active growth. If the grass is unusually tall before mowing and if clippings are overly thick, they may even smother the grass.

To prevent an over accumulation of thatch, attach a tray or bag to your lawn mower to catch clippings, advises Mitchell. If grass is exceptionally tall and the bag fills rapidly, it may be easier to rake the lawn after mowing.

Use clippings as a mulch in your flower or vegetable garden and around ornamentals, he adds. This will conserve soil moisture and help promote vigorous growth. Spread clippings evenly, taking care not to apply a heavy layer that might prevent water from reaching the soil.

If your lawn has already developed a dense layer of thatch, remove it immediately. In most areas, thatch removal tools may be rented at a nearby hardware or garden center. This implement has vertical cutting blades which move thatch to the surface where it may be raked and removed. Thatch, like clippings, may be used as a mulch.

Thatch removal should be done when grass is growing vigorously, says Mitchell. For best time is in the spring or late summer. In bermula and zoysia, bluegrass and fescue lawns, the thatch should be removed in early or midsummer.

LUNCH AVAILABLE

Cheerio Has 1,000 lb. Again

Another official production record exceeding a half ton of butterfat has been completed by Strickst Ivanhoe Cheerio (GP), a Registered Holstein cow owned by Hiram S. Aungst, Elizabethtown This is the second time that "Cheerio" has achieved the 1,000 lb butterfat production level in a single lactation. This record ranks among 2,515 similarly completed by Registered Holstein cows on official test.

The Pennsylvania Holstein's official record of production totalled 25 693 lbs of milk and 1.141 lbs of butterfat in 365 days. She started her lactation at the age of 6 years and 9 months and was milked twice daily.

"Cheerio" was bred in the Aungst herd She was sired by Osborndale Ivanhoe (EX), a bull that has earned a Gold Medal Sire recognition

Pennsylvania State University supervised the weighing and sample testing of her production in cooperation with the Dairy Herd Improvement Registry program of the Holstein-Friesian Association of America.

Predict Egg Prices To Average 5c Higher In Next 12 Months

U S farm egg prices for the 12 month period beginning July 1 are expected to average about five cents per dozen above the preceding 12 months, according to a report released recently by the Poultry Survey Committee It was also estimated higher labor, interest, and feed costs would eat up about 1 cent a dozen of the increase

The report went on to predict a 10-15% increase hatch of egg type chicks during the first half of 1969 as compared to the same period of this year Increases at or above this level of hatch would likely lead to over-expansion in the industry and subsequently depress egg prices

U S farm turkey prices during August-November will likely average 21 5 to 22 cents, about 2 to 2 5 cents per pound higher than during the same period of 1967 Most of this price increase for the new crop will occur during the latter part of the August-November period

July-December nine city ready-to-cook broiler prices may average about 1 cent per pound higher than a year earlier July-September prices may average 26 5 to 27 cents while October-December prices may average 24 cents

The organization of the Poultry Survey Committee is co-sponsored by the American Feed Manufacturers Association and the National Turkey Federation
